

AMENDMENT TO THE ABSTRACT

Please replace the abstract of the application with the following substitution:

“A camera adapter for optical devices, in particular microscopes. The present solution is ~~directed to~~ includes a camera adapter which ~~makes it possible to connect~~ enables any video cameras and photographic cameras to connect to an existing image out-coupling system, e.g., the beam splitter of a microscope. The adapter can also be used for stereo microscopes ~~[[and]] in particular [[for]] ophthalmic microscopes~~. The camera adapter is arranged between the image out-coupling element and the camera. Its housing has two connection pieces. The microscope-side connection piece has a quick-change device and the camera-side connection piece has a filter thread. The technical solution provides a camera adapter for connecting digital cameras, ~~preferably having a monitor at the back of the housing,~~ to a microscope, ~~particularly an ophthalmic microscope~~. By using intermediate rings, the camera adapter is suitable for different cameras and facilitates exchange of cameras. The camera can be positioned in such a way that the observer can view the object through the eyepiece as well as on the camera monitor without substantially changing his/her sitting position.”

No new information was added by the above amendment.
